

Uber

Market Research Analysis

Group Members: Alanna Leong, Thy Le, Ruchi Patel, Dylan Prasad, Huy Vo, Jiahui Wu

Introduction

- Founded 2009.
- Mobile App official launch in San Francisco in 2011.
- Started as luxury then introduced UberX.
- First legal rideshare license in the world.
- Technology company not a taxi company.
 - "Seek forgiveness rather than permission".
 - Predicted arrival times more accurate than Google APIs.
- Expanded operations globally and is now the largest ride sharing company in the world.

Research Objectives

1. Brand Perception and Emotional Connection
2. Loyalty and Retention Strategies
3. Marketing Strategies and Campaign Effectiveness
4. User Experience and Accessibility
5. Effectiveness of Feedback Mechanisms

Unit of Analysis

1

Uber Rideshare
User

Theoretical Model

Unit of Analysis: One Uber Rideshare User

Independent Variables

Waiting Time
App Usability
Promotions
Trip Purpose

Dependent Variables

Brand Perception
User Satisfaction
Perceived Safety
Willingness to Pay

Control Variables

Age
Gender
Income
Education
Location

Purpose: The purpose of your theoretical model is to explain and predict what factors influence Uber users' satisfaction, usage, safety perceptions, and willingness to pay.

Demographic Profile

Age

Gender

Demographic Profile

Education

What is the highest level of education you have completed?

Employment Status

What is your current employment status?

Demographic Profile

Income

What was your total household income (in USD) before taxes in the past 12 months?

Demographic Profile

Occupation

What best describes your occupation? – Other (please specify): – Text

Occupation (continued)

What best describes your occupation? – Selected Choice

SPSS MODEL #1

Paired Sample t-Test

- Is a difference between users' overall brand perception and satisfaction with their most recent ride?
- While operations and service delivery are performing well, there may be broader brand image issues (e.g., safety, trust, pricing or promotions) negatively influence users' general perception of Uber.
- Recommendations:
 1. Invest in brand building efforts.
 2. Uncover factors influence brand perception.
 3. Loyalty programs.

SPSS MODEL #2

Paired Sample t-Test

- Is a difference between users' overall brand perception and willingness to recommend Uber to friends/colleagues?
- Riders share their experience with friends and colleagues based on practical experience such as overall driver service, convenience, price and duration. They are not thinking about the Uber brand image when recommending Uber.
- Recommendations:
 1. Investing in a brand storytelling campaign highlighting uber's core values
 2. Referral and/or loyalty programs
 3. Bridge the ride experience with brand perception

SPSS MODEL #3

Regression Analysis

Factors that influence brand perception:

Likelihood to recommend Uber
($B = .797$, $p < .001$)

Willingness to pay more for better quality
($B = .210$, $p = .009$)

Older users
($B = .196$, $p = .031$)

Device used to request Uber
($B = -.509$, $p = .009$)

Adjusted R Square = .589

Results from Regression Analysis

1. Primarily by loyalty - Recommendation intent
2. Perceived value - Willingness to pay
3. Trust - Age factor
4. Device experiences - Risk to brand perception
5. How to strengthen brand equity?

Brand Perception vs Likelihood to Recommend

ANOVA						
		Sum of Squares	df	Mean Square	F	Sig.
How long have you been an Uber member?	Between Groups	11.244	4	2.811	1.721	.154
	Within Groups	130.708	80	1.634		
	Total	141.953	84			
How often have you used Uber in the past 6 months?	Between Groups	2.420	4	.605	.508	.730
	Within Groups	96.510	81	1.191		
	Total	98.930	85			
On average, how many Uber rides do you take in a typical week?	Between Groups	.151	4	.038	.209	.933
	Within Groups	14.651	81	.181		
	Total	14.802	85			
On a scale of 0-10, how likely are you to recommend Uber to a friend or colleague? - Group	Between Groups	20.909	4	5.227	20.482	<.001
	Within Groups	20.672	81	.255		
	Total	41.581	85			
On a scale of 0-10, how likely are you to recommend Uber to a friend or colleague?	Between Groups	375.764	4	93.941	43.265	<.001
	Within Groups	175.875	81	2.171		
	Total	551.640	85			

When comparing brand perception and likelihood to use Uber or recommend it to others:

- There is a significant difference in brand perception and likelihood to recommend Uber to others but not to how often the consumer uses Uber themselves.
- Users can view Uber in a negative or positive light but it will not affect them using Uber.
- Those who have a better brand perception (Extremely Good, Somewhat Good) are more likely to recommend Uber to others than those who see them as Extremely Bad and Somewhat Bad.
- Those who are neutral are still likely to recommend Uber to others.
- Illustrates that brand perception is tied to enthusiasm and increasing brand perception will increase natural advertisement.

Types of Devices Used & App Issues

When comparing types of devices used (Apple, Android, etc) vs App Issues:

ANOVA

		Sum of Squares	df	Mean Square	F	Sig.
How frequently do you experience the following app issues? – Difficulty Navigating within App	Between Groups	7.538	2	3.769	5.354	.007
	Within Groups	53.500	76	.704		
	Total	61.038	78			
How frequently do you experience the following app issues? – Error Messages	Between Groups	8.094	2	4.047	6.454	.003
	Within Groups	47.653	76	.627		
	Total	55.747	78			

- 2 out of 5 of the questions that explored app issues found a significant difference between the type of devices used to book their ride and experiencing issues with the app.
- Unfortunately, our sample size was too small to do a Post Hoc test to see which groups are different from each other.
- Would recommend getting more response to see which group needs application improvements.
- We gathered that 91% are Apple users, 7.6% Samsung and 1% other.
- Bar Chart: We can see 60% of Apple users did not have issues navigating the app while 40% experienced some issues.
- 40% of Samsung users did not experience issues navigating the app while 60% did.
- Other had experienced issues navigating the app.

Which device do you usually use to request an Uber?

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Apple	72	80.0	91.1	91.1
	Samsung	6	6.7	7.6	98.7
	Other	1	1.1	1.3	100.0
	Total	79	87.8	100.0	
Missing	System	11	12.2		
Total		90	100.0		

Types of Devices Used & App Issues

When comparing types of devices used (Apple, Android, etc) vs App Issues:

ANOVA

		Sum of Squares	df	Mean Square	F	Sig.
How frequently do you experience the following app issues? – Difficulty Navigating within App	Between Groups	7.538	2	3.769	5.354	.007
	Within Groups	53.500	76	.704		
	Total	61.038	78			
How frequently do you experience the following app issues? – Error Messages	Between Groups	8.094	2	4.047	6.454	.003
	Within Groups	47.653	76	.627		
	Total	55.747	78			

- 2 out of 5 of the questions that explored app issues found a significant difference between the type of devices used to book their ride and experiencing issues with the app.
- Unfortunately, our sample size was too small to do a Post Hoc test to see which groups are different from each other.
- Would recommend getting more response to see which group needs application improvements.
- We gathered that 91% are Apple users, 7.6% Samsung and 1% other.
- Bar Chart: We can see 65% of apple Users did not have issues with error messages on the app while 35% did experience issues..
- 67% of Samsung users did not experience error messages while 33% did.
- Other had experienced error messages.

Which device do you usually use to request an Uber?

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Apple	72	80.0	91.1	91.1
	Samsung	6	6.7	7.6	98.7
	Other	1	1.1	1.3	100.0
	Total	79	87.8	100.0	
Missing	System	11	12.2		
Total		90	100.0		

Income & Type of Uber Chosen

When comparing Income vs Type of Uber Chosen:

- One-Sample t-Test showed a significance in levels of income and a dramatic difference in means for the incomes of uber users (7.844).
- One-Sample t-Test showed a significance in types of ride chosen and a mean of (1.582).
- When comparing the two between each other using ANOVA, we found no relationship between income and types of rides chosen but we did observe that majority of our consumers make more than 150k and select UberX.

One-Sample Test							
Test Value = 0							
	t	df	Significance		Mean Difference	95% Confidence Interval of the Difference	
			One-Sided p	Two-Sided p		Lower	Upper
What was your total household income (in USD) before taxes in the past 12 months?	20.113	76	<.001	<.001	7.844	7.07	8.62
What type of Uber ride do you usually choose?	11.885	78	<.001	<.001	1.582	1.32	1.85

ANOVA					
What type of Uber ride do you usually choose?					
	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	11.249	11	1.023	.695	.738
Within Groups	95.608	65	1.471		
Total	106.857	76			

Customer Segmentation

Categorical Variable: What is your overall perception of the brand?

Continuous Variables: Gender, Education, Membership, Frequency/Usage, Recommendation, Device, Age

Group	Size	Characteristics	Perception of Brand	Name
1	20.5%	- Young (25–34), mostly female - High satisfaction - College education - Newer users, low to moderate ride frequency	Somewhat good	Moving Millennials
2	35.9%	- Largest cluster, mid-age (25–34), mix of genders - Frequent users, long-tenured - Very high satisfaction	Somewhat good	Uberfanatics
3	12.8%	- Older (45+), college education, long-tenured - Most loyal: high satisfaction	Extremely good	Legendary Loyalists
4	16.7%	- Mid-age (35–44), university education - Moderate satisfaction - Infrequent riders	Neutral	Casual Cruisers
5	14.1%	- Older (45+), mostly male - Long-term users but very low satisfaction	Somewhat good	Fickle Feelers

Customer Segmentation

Categorical Variable: What is your overall perception of the brand?

Continuous Variables: Gender, Education, Membership, Frequency/Usage, Recommendation, Device, Age

Group	Size	Characteristics	Perception of Brand	Name
1	20.5%	- Young (25–34), mostly female - High satisfaction - College education - Newer users, low to moderate ride frequency	Somewhat good	Moving Millennials
2	35.9%	- Largest cluster, mid-age (25–34), mix of genders - Frequent users, long-tenured - Very high satisfaction	Somewhat good	Uberfanatics
3	12.8%	- Older (45+), college education, long-tenured - Most loyal: high satisfaction	Extremely good	Legendary Loyalists
4	16.7%	- Mid-age (35–44), university education - Moderate satisfaction - Infrequent riders	Neutral	Casual Cruisers
5	14.1%	- Older (45+), mostly male - Long-term users but very low satisfaction	Somewhat good	Fickle Feelers

Recommendations Cluster 2

"Uberfanatics"

Large group, female-skewed

Long tenure, high satisfaction

Brand perception not very high
despite frequent use

1. Brand Perception and Emotional Connection

3. Marketing Strategies and Campaign Effectiveness

- Push messaging that links service to brand: in-app messaging that emphasizes Uber's core values.
- Safety updates followed by, *"Your ride, your rules — always safe, always secure."*
- Successfully booking a trip, *"Right when you need it. Every time."*
- Launching Uber app, *"Your next ride is seconds away."*

2. Loyalty and Retention Strategies

- Create an Uber "Elite" status program: gamify loyalty with badges, levels (Bronze to Platinum), and exclusive offers.

5. Effectiveness of Feedback Mechanisms

- Customer polls in-app or email surveys: invest resources to underperforming areas rather than well-performing factors.

Recommendations Cluster 1

"Moving Millennials"

Female-leaning, young adults

Frequent users, satisfied, but only somewhat positive on brand perception

2. Loyalty and Retention Strategies

- Build loyalty through lifestyle-based rewards: offer perks like "7th ride is on us", Uber Eats discounts, or partnerships with local gym, movies, and events and earn points.

3. Marketing Strategies and Campaign Effectiveness

- Push engagement campaigns: personalize recommendations tied to lifestyle (e.g., must-see attractions, locals favourites, etc.) nearby destination.

4. User Experience and Accessibility

- Strengthen safety messaging: reassure female-skewed group by increasing transparency on driver profiles, live tracking, requesting female drivers and safety tools.

Results and Recommendations

- 1. Weak Brand Perception and Emotional Connection**
Focus on referral and loyalty programs that encourage advocacy. Maintain high service quality to sustain promoters.
- 2. Ineffective Loyalty and Retention Strategies**
Emphasize premium positioning and value-for-quality messaging (e.g. Uber Comfort, Uber Premium). Highlight service reliability and convenience.
- 3. Limited Personalization in Marketing**
Marketing should focus on psychological and experiential factors rather than demographics.
- 4. User Experience and Accessibility Gaps**
Investigate platform UX and app performance differences. Standardize experience and fix device specific usability or performance issues.
- 5. Weak Feedback Mechanisms**
Invest in a recovery campaign and feedback surveys to better understand underlying issues for positive experience.

Thank you.
